

# The Archives

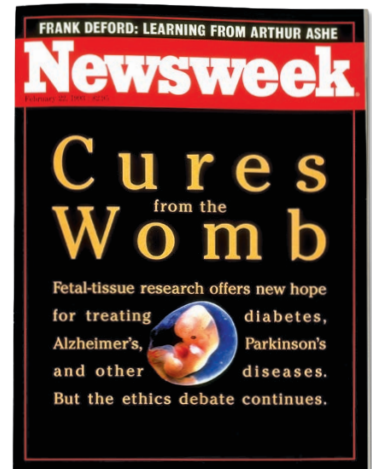

2007

“The longstanding war of words between Washington and Tehran is edging toward something more dangerous...with Americans and Iranians jousting on the chaotic battleground of Iraq, the chances of a small incident spiraling into a crisis are higher than they’ve been in years,” *Newsweek* reported. Nearly two decades later, the U.S. and Iran are engaging in another tit-for-tat proxy exchange—this time the battleground extends to the broader region and the Red Sea. The Israel-Hamas war has expanded beyond the two parties, involving the U.S., Iran, Houthis and Hezbollah.

1976

“The Concorde,” *Newsweek* said, “produces more noise and pollution than the current generation of jumbo jets.” The Franco-British supersonic airliner burned 20 tons of fuel an hour. Last November, Gulfstream Aerospace successfully operated the first transatlantic flight using sustainable aviation fuel.

1993

“They are ‘plastic’: a very young fetal cell has the potential to be a kidney, a liver cell or just about anything else,” *Newsweek* wrote. The controversial field of science has come under fire by anti-abortion rights groups and conservative candidates. President Biden lifted the research restrictions in the field that were imposed under President Trump. [N](#)
